

HUSTLESTACK

FREE STARTER / VERSION 1.0

5 Working AI *Workflows*

Five small operating systems designed to leave a useful file behind.

Separate facts from assumptions before you create.

Input

One official source, the decision your content must support and the publication date.

1. Capture

Record title, author, date and URL.

2. Extract

List only directly supported facts.

3. Separate

Move interpretation into an assumptions section.

4. Reject

Remove claims the source cannot support.

OUTPUT: `source-brief.md`

Give one researched idea multiple useful jobs.

Input

A verified source brief and one audience problem.

1. Choose

Select one flagship asset.

2. Derive

Map Reel, carousel, short post and email roles.

3. Connect

Choose one relevant product or free next step.

4. Measure

Assign one behavior metric to each format.

OUTPUT: `asset-map.md`

Replace a clever sentence with a reusable standard.

Required structure

Role, outcome, inputs, constraints, output format, acceptance criteria, rejection conditions and next action.

Inputs

What must be supplied before execution?

Constraints

What must never happen?

Acceptance

How will useful work be recognized?

Failure

When should the run stop?

OUTPUT: `prompt-system.md`

Review the decision before polishing the design.

Behavior

What must the visitor understand and do?

Hierarchy

Does each section answer one buyer question?

Proof

Can every claim be supported?

Direction

Are type, imagery and motion intentional?

Mobile QA

Any clipping, overlap or weak CTA?

OUTPUT: qa-report.md

Repurpose the insight, not the file.

Reel

Demonstrate the outcome or tension.

Carousel

Teach the sequence or evidence.

Black card

Compress one memorable idea.

Email

Add context, limitation and next decision.

Review after seven days

Compare saves, profile actions, clicks and replies. Continue only the formats that perform the job assigned to them.

OUTPUT: `weekly-plan.md`

NEXT STEP

Build the system your current bottleneck needs.

Use the free workflows first. When you need complete implementation files, explore the three HustleStack packs.

Evidence-to-Asset

Research, claim checks, asset mapping and experiments.

Prompt Systems Library

Thirty systems across research, offers, content, web, operations and QA.

Professional AI Landing Pages

Prompts, editable starters, mobile QA, publishing and client delivery.
